

Solar System Facts

This short document lists a few factual statements about the solar system for testing the PDF ingestion pipeline.

The Inner Planets

Mercury is the closest planet to the Sun. Venus is the hottest planet in the solar system, with surface temperatures around 465 degrees Celsius. Earth is the only planet known to support life. Mars has two small moons named Phobos and Deimos.

The Outer Planets

Jupiter is the largest planet in the solar system. Saturn is famous for its extensive ring system. Uranus rotates on its side relative to its orbit. Neptune was the first planet located through mathematical prediction rather than observation.
